

User stories with acceptance guidelines:

1. Matchday Countdown

As a fan, I want to see a live countdown to the next match so that I always know how long until kickoff. Acceptance Criteria:

- Countdown displays days, hours, minutes, and seconds.
- Countdown updates automatically without page refreshing.
- When the match begins, the countdown switches to “Match in progress”

2. League Table Position

As a fan, I want to view FC Barcelona’s current league table position so that I can track their progress throughout the season. Acceptance Criteria:

- The table shows rank, points, wins, draws, losses, and goal difference.
- Data updates at least once per day or after each match.
- The table highlights FC Barcelona’s row visually.

3. Team Formation Display

As a fan, I want to see the current team formation so that I understand how the team is lining up for the next match. Acceptance Criteria:

- Formation shows player names and positions.
- Injured or suspended players are visually marked.
- Formation updates automatically when new lineup data is available

4. Player Injury Status

As a fan, I want to view which players are injured so that I know who is unavailable for upcoming matches. Acceptance Criteria:

- The injury list shows player name, injury type, and expected return date.
- Injured players appear with a red indicator in the formation view.
- Data refreshes at least once per day.

5. Match Schedule

As a fan, I want to see the upcoming match schedule so that I can plan when to watch games. Acceptance Criteria:

- Schedule shows the opponent, date, time, and competition.
- Clicking on a match opens a detailed view.
- Past matches are visually separated from future matches.

6. Match Detail View

As a fan, I want to open a detailed view of a match so that I can see additional information like venue and referee. Acceptance Criteria:

- Details of view include venue, referee, competition, and kickoff time.
- Detailed view loads within 2 seconds.
- Users can navigate back to the main schedule.

Non-Functional Requirements:

1. Performance

The app shall load the home page in under 2 seconds on a 10 Mbps connection.

2. Availability

The app shall maintain 99% uptime during the La Liga season (August–May).

3. Data Freshness

Match, table, and injury data shall be updated at least once every 24 hours.

AI Generated app requirements:

- The app shall allow users to **create and manage personal profiles**, including name, photo, and contact preferences.
- The app shall provide **secure authentication** using email and password or third-party login (e.g., Google, Microsoft).
- The app shall include a **feedback submission feature** so users can report issues or suggest improvements.
- The app shall support **offline access** for core features, syncing data automatically when connectivity is restored.

These are broad, platform-agnostic requirements that fit almost any modern application — perfect for demonstrating general elicitation capability in your assignment.
